

Plugins and Extensions support

- Enhance the functionality of Browsers
E.g.
 1. Adobe Flash Player
 2. Java
 3. Browser Extensions – Ad Blockers, advertisements, password managers

Incognito / Private browsing mode

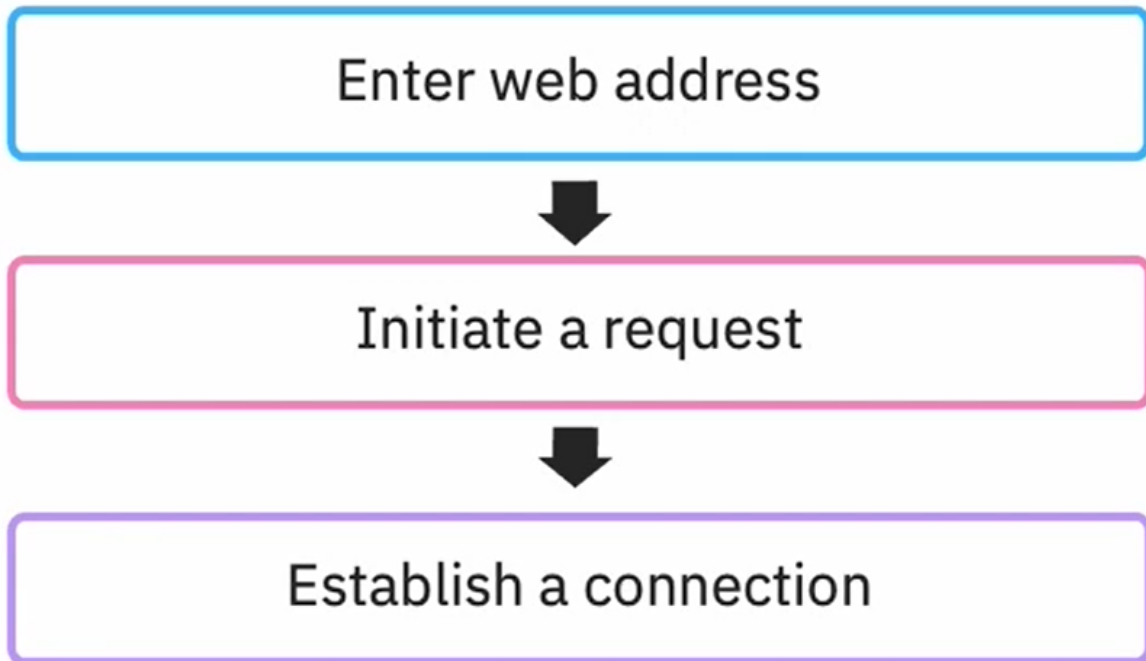

- Web Browsing without traces
- Doesn't provide complete anonymity

Mobile versus desktop versions of browsers

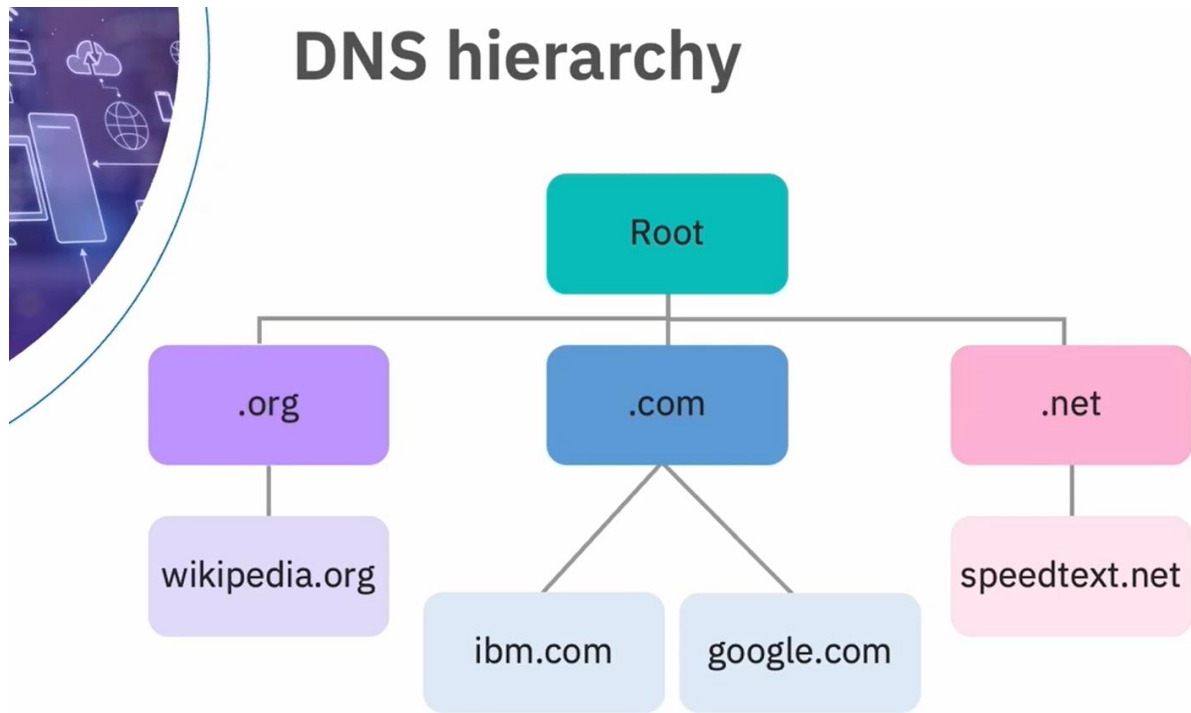

What is Domain Name System.

Translates human-readable domains into IP addresses

- DNS translates the domain name into IP addresses, Enabling access to websites and online services.
- Web requests involve DNS hierarchy, request initiation, recursive resolution, TLD server contact, and authoritative name server query to retrieve IP addresses.
- DNS lookup includes recursive resolution, containing root and TLD servers, querying authoritative name servers, caching IP addresses, and using TTL values.

DNS hierarchy

DNS resolution process
